Notes to Schedule of Investments

— Fair Value Measurements and Disclosures — In January 2010, the Financial Accounting Standards Board issued Accounting Standards Update (“ASU”) No. 2010-06 “Improving Disclosures about Fair Value Measurements.” This ASU will add new requirements for disclosures into and out of Levels I and II fair-value measurements and information on purchases, sales, issuances and settlements on a gross basis in the reconciliation of Level III fair-valued measurements. It also clarifies existing fair value disclosures about the level of disaggregation, inputs and valuation techniques. Except for the detailed Level III reconciliation disclosures, the guidance in the ASU is effective for annual and interim reporting periods in fiscal years beginning after December 15, 2009. The new disclosures for Level III activity are effective for annual and interim reporting periods in fiscal years beginning after December 15, 2010. Management is currently evaluating the impact that adoption will have on the Trust’s portfolio holdings disclosures.

The Trust values its investments in accordance with Accounting Standards Codification 820 - Fair Value Measurements and Disclosures (“ASC 820”). ASC 820 defines fair value, establishes a framework for measuring fair value in GAAP, and expands disclosures about fair value measurement. The changes to current practices, resulting from the application of ASC 820, relate to the definition of fair value, the methods used to measure fair value, and expanded disclosures about fair value measurement. ASC 820 emphasizes that fair value is a market based measurement, not an entity specific measurement; as such, a fair value measurement should be determined based on the assumptions that market participants would use in pricing the asset or liability. As a basis for considering market participant assumptions in fair value measurements, ASC 820 establishes a fair value hierarchy that distinguishes between, (1) market participant assumptions developed based on market data obtained from sources independent of the Trust (observable inputs) and (2) the Trust’s own assumptions about market participant assumptions developed based on the best information available in the circumstances (unobservable inputs). The three levels defined by ASC 820 hierarchy are as follows:

Level I – Quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level II – Inputs other than quoted prices included within Level I that are observable for the asset or liability, either directly or indirectly. Level II assets include the following: quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability, and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

Level III – Unobservable pricing input at the measurement date for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that observable inputs are not available.

In some instances, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest input level that is significant to the fair value measurement in its entirety.
