

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

We have received your Ordinary Form Number 02853 dated April 6, 2004. Regarding that Form and as requested by it, we may indicate the following:

1. Sociedad Quimica y Minera de Chile S.A. ("SQM") and Distrinor S.A. ("Distrinor") subscribed, on May 22, 2001, a Natural Gas Supply Contract, of a "fixed nature", pursuant to which Distrinor, among other aspects, is required to supply and sell to SQM -for a period of 10 years beginning on June 1, 2001- all the natural gas the Company requires for "heat generation" at its industrial facilities located in Chile's Second Region and that the parties have estimated to be approximately 3,850,000 million Btu per year.

That natural gas, coming from Argentina, has been continuously provided up until this date in the quantity and quality agreed upon. For this year, SQM expects to continue receiving natural gas from Distrinor in quantities similar to that bought during 2003.

2. The aforementioned Natural Gas Supply Contract sets forth clear responsibilities and duties for both parties.

The above notwithstanding, SQM and Distrinor have held meetings with the purpose of analyzing the public information regarding the "natural gas restrictions on exports from Argentina" subject and its potential effects on both SQM and Distrinor. So far, the latter has not informed about reductions of the natural gas supplied to SQM and, in the event of reducing the supply, the extent of the same.

3. If faced with any reduction in its natural gas supply, SQM will adopt the necessary measures to continue generating the heat required by its industrial facilities located in Chile's Second Region.

SQM's industrial equipments that use natural gas may also operate on diesel and some of them -after certain investments- may also operate on fuel oil. Diesel's purchase price is higher than natural gas' and fuel oil's purchase price is lower than diesel's and higher than natural gas'. The higher costs SQM will have to face should natural gas supply be restricted will depend on the volume of the reduction and the length of the period covered by that reduction. Therefore, SQM cannot estimate the economic impact that an eventual natural gas supply reduction might have. However, SQM's natural gas purchases during 2003 represented approximately 1.5% of the total costs for the year.

4. SQM has subscribed several energy and power supply contracts for the continuous and reliable development of its industrial operations in Chile's Second Region with the respective power companies and they have not informed SQM about potential restrictions on that supply.

We remain at your disposal to clarify any additional aspects that you may deem relevant in relation to the above.

Yours truly,
