--Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Item 8.01 Other Events.

Agenus Inc. announced today that the first patient has been dosed in a Phase 1/2 clinical trial of the anti-OX40 agonist antibody INCAGN1949. The trial is being conducted by, and in collaboration with, Incyte Corporation. The open-label, dose-escalation portion of the trial will evaluate the safety and tolerability of INCAGN1949 in patients with advanced or metastatic solid tumors and determine its pharmacologically active and/or maximum tolerated dose. Part 2 of the trial is planned to evaluate the recommended dose of INCAGN1949 in multiple tumor types.

INCAGN1949 is an agonist antibody targeting OX40, otherwise known as CD134 or TNFRSF4. OX40 is a co-stimulatory receptor found on activated T cells. OX40 engagement has a two-pronged effect; it can stimulate proliferation of activated T cells that may promote tumor killing and inhibit the activity of regulatory T cells that mediate immune suppression. INCAGN1949 was discovered during an earlier collaboration with Ludwig Cancer Research. This antibody is being co-developed with Incyte Corporation.

The full text of the press release issued in connection with the announcement is attached hereto as Exhibit 99.1 and is incorporated herein by reference.

Item 9.01 Financial Statements and Exhibits.
