Form 6-K  
April 02, 2003

SECURITIES AND EXCHANGE COMMISSION  
Washington, DC 20549

## FORM 6-K

Report of Foreign Private Issuer  
Pursuant to Rule 13a-16 or 15d-16  
of the Securities Exchange Act of 1934

CIK # 1164771

As at March 31, 2003

### NORTHERN DYNASTY MINERALS LTD.

800 West Pender Street, Suite 1020  
Vancouver, British Columbia  
Canada V6C 2V6

Indicate by check mark whether the registrant files or will file annual reports under cover Form 20-F or Form 40-F.

Form 20-F...X.... Form 40-F.....

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1): \_\_\_\_

Note: Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7): \_\_\_\_

Indicate by check mark whether by furnishing the information contained in this Form, the registrant is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes ..... No .....

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with  
Rule 12g3-2(b): 82- \_\_\_\_\_

#### Signatures

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

By: /s/ Jeffrey R. Mason  
Director and Chief Financial Officer

Date: March 31, 2003

\* Print the name and title of the signing officer under his signature.

### INDEPENDENT RESOURCE ESTIMATE CONFIRMS A WORLD-CLASS GOLD-COPPER-MOLYBDENUM DEPOSIT AT PEBBLE PROJECT, ALASKA

**March 31, 2003, Vancouver, BC** - Ronald W. Thiessen, President and CEO of Northern Dynasty Minerals Ltd. (TSX Venture: NDM; OTCBB: NDMLF) is pleased to report the results of an independent mineral resource estimate by Snowden Mining Industry Consultants Inc. ("Snowden") of West Perth, Australia for the Pebble porphyry gold-copper-molybdenum deposit located in southwestern Alaska. This is the first resource estimate for the Pebble deposit completed by an independent third party engineering company and indicates strong potential for a large scale, long life mine development.

The work establishes the Pebble deposit as one of the world's largest gold and copper resources, containing **13.1 million ounces of gold and 6.8 billion pounds of copper** within Inferred Mineral Resources estimated by Snowden at **1.0 billion tonnes grading 0.61% copper-equivalent** (0.40 grams gold per tonne, 0.30% copper, and 0.015% molybdenum above a cut-off grade of 0.30% copper-equivalent). Importantly, Snowden estimates that the Pebble deposit contains significant amounts of high-grade resources: **141 million tonnes of 0.67 grams gold per tonne, 0.48% copper and 0.019% molybdenum, or 0.97% copper-equivalent** above a cut-off grade of 0.80% copper-equivalent.

Snowden's estimate is based on drill core assay results (18,353 m in 110 holes) obtained to 1997 by Cominco American Incorporated (now part of "Teck Cominco") and detailed geological logging of the drill core by Northern Dynasty. Paul Blackney, B.Sc.(Hons), MAusIMM, MAIG, of Snowden was responsible for the resource estimate. He is an independent Qualified Person as defined under National Instrument 43-101. In accordance with National Instrument 43-101, a technical report detailing the resource estimate will be filed on SEDAR within 30 days. The specific breakdown of Inferred Mineral Resources for the Pebble deposit above varying cut-off grades is tabulated below:

#### PEBBLE DEPOSIT INFERRRED MINERAL RESOURCES<sup>1</sup>

Cut-Off CuEQ <sup>2</sup> %	Tonnes Million	Gold g/t	Copper %	Molybdenum %	AuEQ <sup>2</sup> g/t	CuEQ <sup>2</sup> %	Contained Metal		
							Gold M oz	Copper B lbs	AuEQ <sup>2</sup> M oz
0.30	<b>1,013</b>	0.40	0.30	0.015	0.96	<b>0.61</b>	13.1	6.8	31.2
0.40	<b>940</b>	0.42	0.31	0.015	0.99	<b>0.63</b>	12.5	6.5	29.9
0.50	<b>692</b>	0.46	0.35	0.016	1.09	<b>0.69</b>	10.2	5.3	24.2
0.60	<b>434</b>	0.53	0.39	0.017	1.23	<b>0.78</b>	7.4	3.7	17.1
0.70	<b>271</b>	0.59	0.43	0.018	1.35	<b>0.86</b>	5.1	2.5	11.8
0.80	<b>141</b>	0.67	0.48	0.019	1.52	<b>0.97</b>	3.0	1.5	6.9

Note <sup>1</sup>Mineral resources that are not reserves do not have demonstrated economic viability. An Inferred Mineral Resource is that part of a mineral resource for which quantity and grade can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity.

Note <sup>2</sup>Copper and gold equivalent calculations use metal prices of US\$0.80/lb for copper, US\$350/oz for gold, and US\$4.50/lb for molybdenum. The contained gold, copper, and gold-equivalent represent estimated contained metal in the ground and have not been adjusted for metallurgical recoveries of gold and copper. Molybdenum recovery was assumed to be 60%. Adjustment factors to account for differences in relative metallurgical recoveries for gold, copper, and molybdenum will depend upon the completion of definitive metallurgical testing.

$CuEQ = Cu(\%) + Au(g/t) \times (11.25/17.64) + Mo(\%) \times (59.52/17.64)$ .

$AuEQ = Au(g/t) + Cu(\%) \times (17.64/11.25) + Mo(\%) \times (59.52/11.25)$ .

Robert Dickinson, Co-Chairman of Northern Dynasty stated, "Management is very encouraged by Snowden's resource estimate that has demonstrated the Pebble deposit hosts dramatically more good-grade resources than previously recognized, and we now plan to move the project rapidly towards prefeasibility for a large-scale mining venture".

To put the project into perspective, the tonnage and grades for several gold-copper porphyry deposits prior to the commencement of commercial production are listed below:

#### SELECTED PORPHYRY GOLD-COPPER DEPOSITS PRIOR TO PRODUCTION

Deposit	Location	Owner	Tonnes	Au (g/t)	Cu (%)	CuEQ <sup>1</sup> (%)	Notes <sup>1</sup>
Kemess South	Canada	Northgate	200,440,000	0.63	0.22	<b>0.62</b>	Mineable Reserve estimated by IMC. Source: July/93 Prefeasibility Study.
Cadia	Australia	Newcrest	204,000,000	0.73	0.17	<b>0.64</b>	Ore Reserves estimated by Fluor Daniel/Davy. Source: Feb./96 Feasibility Study.
Batu	Indonesia	Newmont	914,484,000	0.41	0.52	<b>0.78</b>	Proven and Probable Reserves

## Edgar Filing: NORTHERN DYNASTY MINERALS LTD - Form 6-K

Hijau							estimated by Newmont. Source: Mar.31/99 Newmont Annual Report on Form 10K.
-------	--	--	--	--	--	--	--

Note 1 Readers are cautioned that this historical information uses terminology which is dated and so may not be directly comparable to the current information on the Pebble deposit which employs mandated terminology as defined under current Canadian standards. These numbers are also mineral reserves which have demonstrated economic viability. Copper-equivalent values shown here were calculated by NDM management based on the same metal prices and conversion formula as employed by Snowden for the Pebble inferred resource estimates:  $CuEQ = Cu(\%) + Au (g/t) \times (11.25/17.64) + Mo(\%) \times (59.52/17.64)$ .

The Company's next phase of project work will be to upgrade the established resources and fully delineate the good-grade gold-copper resources within the Pebble deposit to enable a rapid recovery of capital costs during the early years of mine production. Importantly, Northern Dynasty's modeling of the Pebble deposit has revealed several priority areas within and adjacent to the deposit that have high potential to host substantial volumes of additional good-grade mineralization. These include two newly identified granodiorite porphyry stocks within the deposit where good-grade gold-copper mineralization and quartz vein stockworks have been encountered in limited previous drilling. In addition, grade and tonnage increases are expected from the drilling of: angle holes across the northeast trending deposit (instead of the vertical drilling completed to date); closer spaced holes (current hole spacing ranges from 100 to 250 m throughout much of the deposit, increasing up to 300 m near the margins of the area drilled); deeper holes (current hole depths in the deposit are variable, generally extending only to depths of 125 - 250 m, many of which bottomed in mineralization); and step out holes (the deposit is open ended to the northeast and southwest).

The Pebble porphyry gold-copper-molybdenum deposit was discovered and generally outlined by Cominco American through drilling on the property to 1997. Geochemical and geophysical surveys by Teck Cominco and more recently by Northern Dynasty substantiated that the Pebble deposit is only part of a much larger series of metal-rich, coalescing hydrothermal sulphide systems. This mineral rich terrain is outlined by an 89 km<sup>2</sup> IP/chargeability anomaly, measuring 21 km in length and up to 9 km in width. Last year, Northern Dynasty executed a Stage One exploration program and drilled 68 holes totaling 11,306 m to commence testing of the many targets within the 89 km<sup>2</sup> hydrothermal system. This program was highly successful and resulted in the discovery of a new porphyry copper-gold-molybdenum deposit, a porphyry copper zone, a gold-copper skarn and several high-grade gold veins. In addition, Northern Dynasty completed a geological model for the Pebble deposit based on detailed examination of Teck Cominco's drill holes.

The Company is now proceeding to formulate Phase Two drilling plans to further develop the entire world-class mineral district at its Pebble gold-copper-molybdenum project. The program is being designed to expand and delineate the good-grade gold-copper-molybdenum portions within the giant Pebble porphyry deposit, as well as the significant new porphyry, skarn and vein discoveries made by Northern Dynasty during its Phase One program. Additional drilling is also being planned to test new high-grade and bulk tonnage, gold-only targets, and to assess the potential for additional porphyry deposits within several untested, large-scale IP chargeability anomalies.

The Pebble property is located in rolling hills at an elevation of 300 m above sea level and is well situated for potential development. Preliminary studies completed by Teck Cominco outlined the road route to a site on Cook Inlet suitable for a deep-draft ocean port, 95 km to the east. The work also indicated that power requirements could be met by natural gas from currently producing offshore wells in the Inlet or from available thermal coal resources located within the State. The Alaska government is highly supportive of mining.

Northern Dynasty acquired an option to purchase a 100% interest (with no underlying royalty or back-in) in the "Resource Lands" hosting the Pebble deposit and earn a minimum 50% interest in the extensive surrounding "Exploration Lands" in 2001. Northern Dynasty is a Hunter Dickinson managed company with 17.2 million shares outstanding. Hunter Dickinson companies have a strong record of success in exploring and developing large gold-copper porphyry projects that have yielded exceptional returns for their shareholders.
