o l	Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))		

## Edgar Filing: THERAVANCE INC - Form 8-K

#### Item 8.01 Other Events.

GlaxoSmithKline plc (GSK) is currently recruiting patients for a long-term exacerbation study in the asthma Phase 3 RELOVAIRTM clinical program. This randomized, double blind, parallel group study is designed to evaluate the safety and demonstrate the benefit of the addition of a long-acting beta2 agonist (LABA) to an inhaled corticosteroid (ICS) by utilizing an endpoint (time to first severe asthma exacerbation) that informs on both safety and efficacy. On March 10 and 11, 2010, the FDA held an Advisory Committee to discuss the design of medical research studies (known as clinical trial design ) to evaluate serious asthma outcomes (such as hospitalizations, a procedure using a breathing tube known as intubation, or death) with the use of LABAs in the treatment of asthma in adults, adolescents, and children. It is unknown at this time what, if any, effect this FDA meeting or future FDA actions will have on the development of the RELOVAIR program. The current uncertainty regarding the FDA s position on LABAs for the treatment of asthma and the lack of consensus expressed at the recent Advisory Committee may result in increased time and cost of the asthma clinical trials in the United States for RELOVAIR and may increase the overall risk of the RELOVAIR asthma program in the United States.
